SUPERSTORE SALES DASHBOARD

USING POWER BI WEEK 2 REPORT

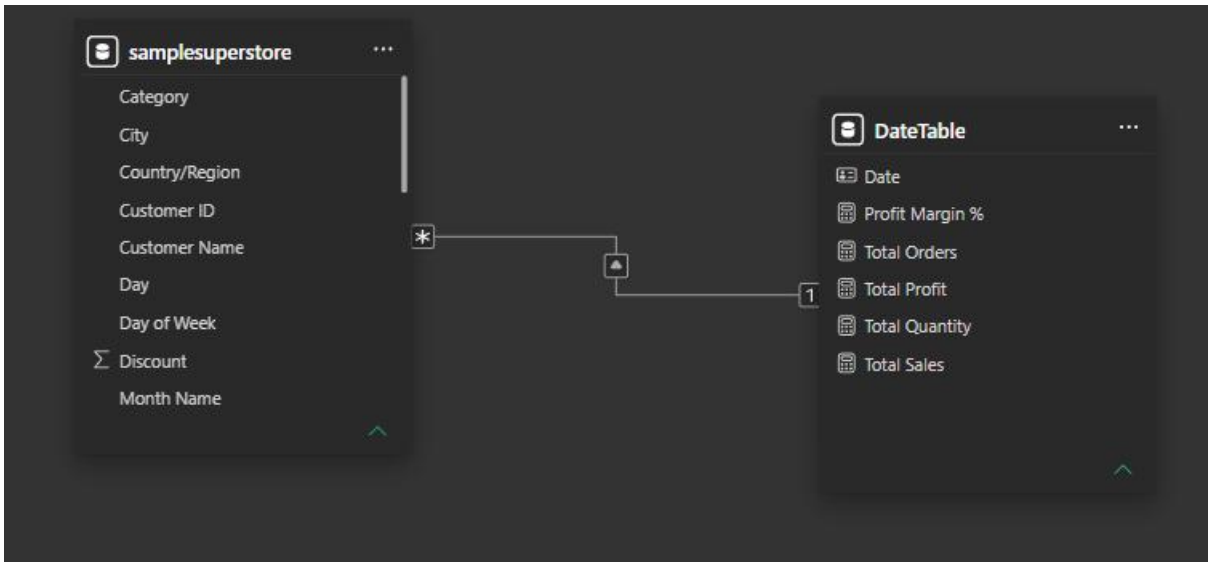

Name: Monisha J
Course: B.Sc. Data Science and Artificial Intelligence

1. INTRODUCTION

In Week 2, the cleaned Superstore dataset was used to create a Power BI dashboard. A Date Table, relationships, DAX measures, and different visualizations were created to analyze sales and profit.

2. DATA MODELING

A Date Table was created using the Order Date. The Date Table was connected with the Superstore table using the Order Date and Date fields. This relationship helps Power BI analyze the data based on dates.

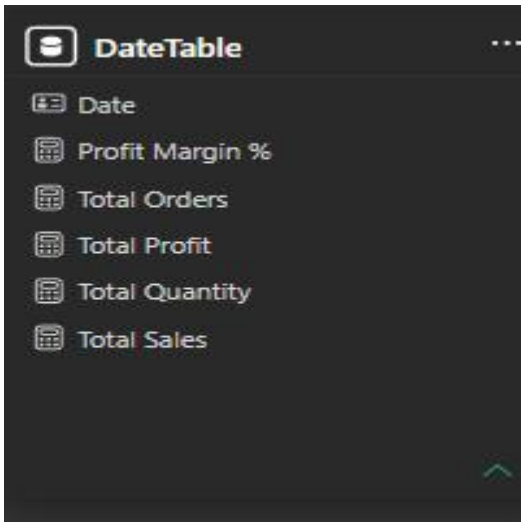

3. DAX MEASURES

The following DAX measures were created:

- Total Sales
- Total Profit
- Total Orders
- Total Quantity
- Profit Margin %

These measures help calculate important sales and profit values.

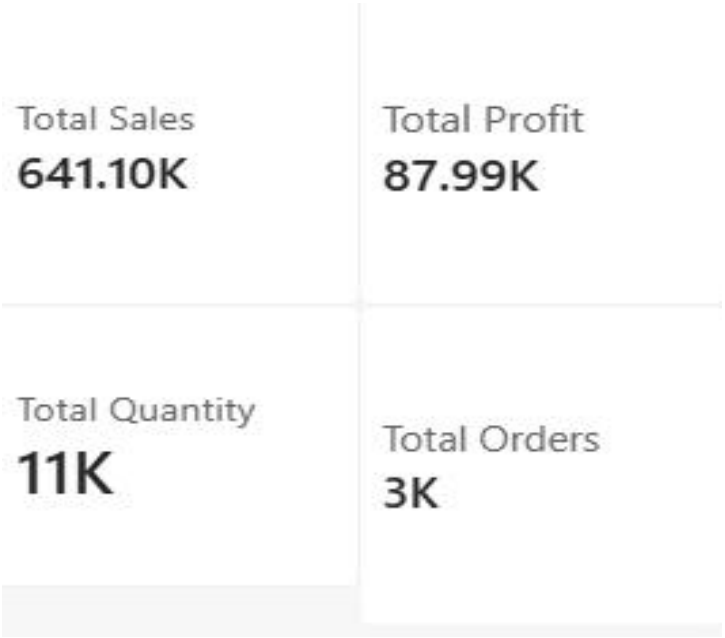

4. KPI CARDS

KPI cards were created to show the main values of the Superstore dataset. The dashboard contains cards for:

- Total Sales
- Total Profit

- Total Quantity
- Total Orders

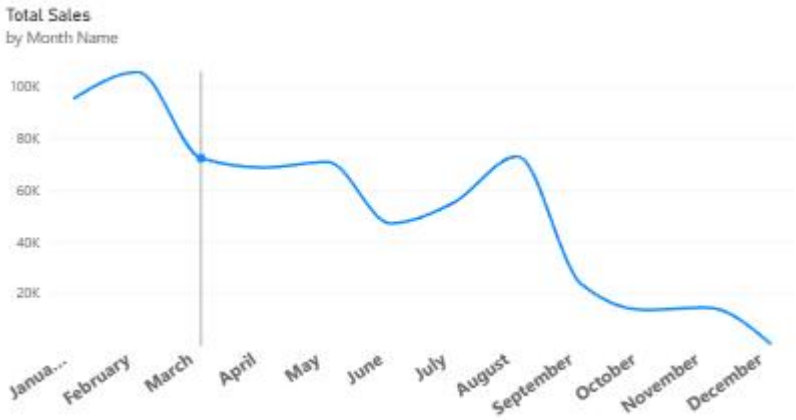

These cards make the important information easy to understand.

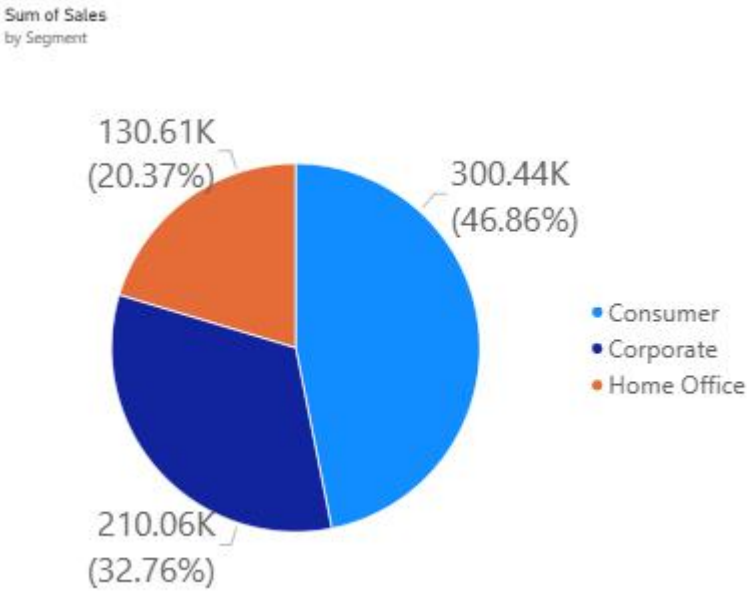

5. SALES AND PROFIT ANALYSIS

Different Power BI charts were created to analyze the sales and profit data.

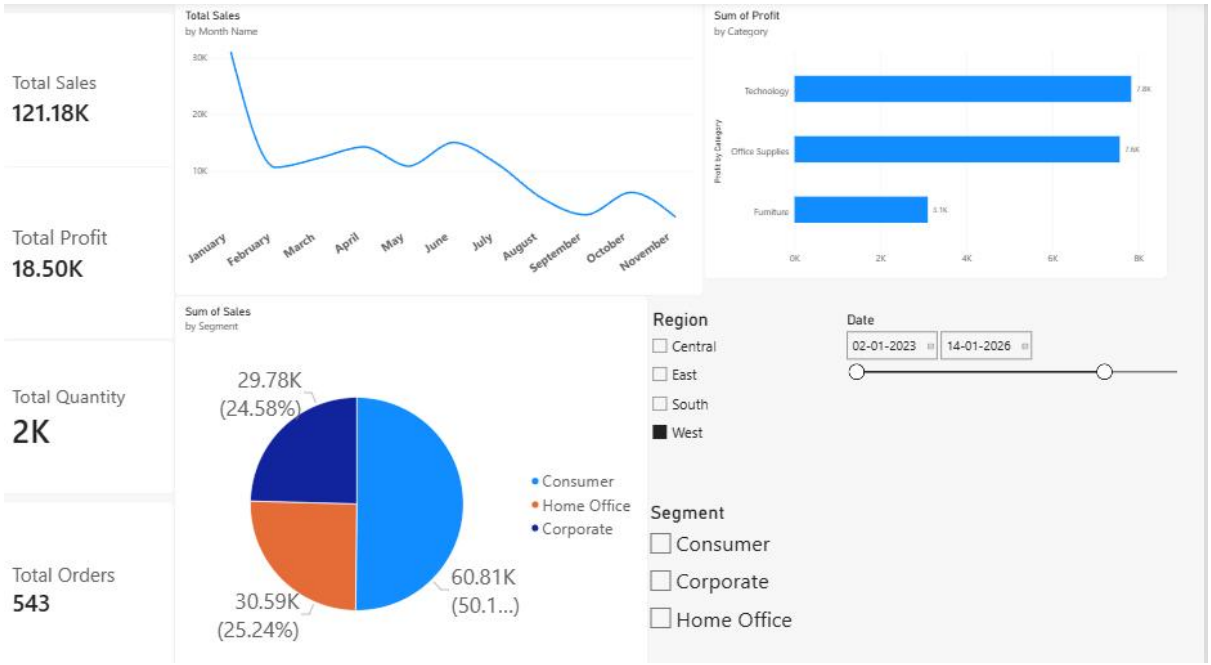

- Sales by Month – shows the sales trend across months.
- Profit by Category – shows profit for different product categories.
- Sales by Segment – shows sales for Consumer, Corporate, and Home Office segments.

7. CONCLUSION

The Superstore Sales Dashboard was successfully created using Power BI. Date modeling, DAX measures, KPI cards, charts, and slicers were used to analyze the sales data. The final dashboard provides a simple and interactive way to understand sales and profit information.
